

RF-7

Oil Treatment

PN 107

BG RF-7 is an oil treatment specially formulated to increase engine compression and power by increasing oil viscosity. It contains additives that keep oil from thickening, protect vital engine parts from corrosive damage, and help seal rings to increase compression and blow-by.

BG RF-7 is a specially formulated professional-use engine oil viscosity improver. Its additives prevent oil oxidation, condition seals to prevent leaks and increase oil pressure, and provide protection against wear.

- ***Improves engine oil viscosity***
- ***Prevents oxidation of oil***
- ***Protects against wear***
- ***Decreases blow-by***
- ***Increases compression***
